

Allianz

Dynamic Asian High Yield Bond

Monthly commentary

- The Fund aims at long-term capital growth and income by investing in high yield rated debt securities of Asian bond markets.
- The Fund is exposed to significant risks of investment/general market, interest rate, valuation, sovereign debt, creditworthiness/credit rating/downgrading, default, emerging market, country and region and currency (such as exchange controls, in particular RMB), and the adverse impact on RMB share classes due to currency depreciation.
- The Fund may invest in high-yield (non-investment grade and unrated) investments and convertible bonds which may subject to higher risks, such as volatility, loss of principal and interest, creditworthiness and downgrading, default, interest rate, general market and liquidity risks and therefore may adversely impact the net asset value of the Fund. Convertibles may also be exposed to risks such as prepayment risk, equity movement and greater volatility than straight bond investments.
- The Fund may invest in financial derivative instruments ("FDI") which may expose to higher leverage, counterparty, liquidity, valuation, volatility, market and over the counter transaction risks. The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.
- This investment may involve risks that could result in loss of part or entire amount of investors' investment.
- In making investment decisions, investors should not rely solely on this material.

Note: Dividend payments may, at the sole discretion of the Investment Manager, be made out of the Fund's capital or effectively out of the Fund's capital which represents a return or withdrawal of part of the amount investors originally invested and/or capital gains attributable to the original investment. This may result in an immediate decrease in the NAV per share and the capital of the Fund available for investment in the future and capital growth may be reduced, in particular for hedged share classes for which the distribution amount and NAV of any hedged share classes (HSC) may be adversely affected by differences in the interests rates of the reference currency of the HSC and the base currency of the Fund.

What Happened in August

August saw notable volatility in US Treasury yields, with the 10-year yield peaking at 4.33% before retracing to 4.23%, marking a modest month-on-month decline of 4bps. Despite mixed economic data, the market found support as the US Federal Reserve (Fed) Chair Jerome Powell signaled at Jackson Hole that the Fed could begin easing monetary policy as early as September. This was further boosted by the 90-day extension of the Sino American trade truce. However, sentiment was occasionally unsettled by headlines suggesting the White House's attempts to influence Fed policy direction. Asia Credit mirrored this volatility, with spreads widening early in the month before tightening toward month-end. A key highlight was the upgrade of India's sovereign rating by S&P from BBB- to BBB, which provided a tailwind to Indian credit spreads.

The JACI Composite Index delivered a solid 1.2% return, with 0.9% attributed to rates and 0.3% to spread compression. Investment Grade (IG) credits matched this performance, while High Yield (HY) outperformed with a 1.5% return, supported

by a 20bps tightening in spreads to 492bps—now below the 500bps threshold. This continued strength sets a positive tone as we enter September. Asia Pacific USD credit supply picked up pace toward the end of August, with 42 new deals totaling USD 20.5 billion issued during the month.

Asian High Yield (HY)

Asia HY spreads tightened by 20 bps, delivering a 1.5% return. Hong Kong Real Estate led the rally, with a developer in the spotlight amid media speculation about a potential take-private deal with an investment firm – later denied by the company. Fresh reports suggest ongoing discussions with investors including the aforementioned investment firm and a real estate investment trust in Singapore regarding asset disposals. Bond prices have moved higher on the back of renewed buying interest.

Another Hong Kong real estate company, despite being downgraded to HY, outperformed as its current spread more than priced in a downgrade. Yet, another strong performer was a global owner, developer and operator of logistics real estate, digital infrastructure and renewable energy, which benefited from two major headlines: a potential RMB 2.5 billion (~USD 350 million) investment from a Zhejiang SOE to expand data centres, and another potential USD 1.5 billion equity injection from a sovereign wealth fund to support growth in logistics, digital infrastructure, and renewable energy.

Portfolio Review

The Fund had another strong month, and outperforming its benchmark by 24bps. Key contributors included underweight allocations to Chinese financials and the Philippines, and positive selection in Hong Kong real estate. A slight drag came from exposure to Hong Kong financials. The portfolio remains positioned to benefit from strong sentiment and higher carry, with long-term performance expected to be driven by security selection and allocation.

Outlook and Strategy

As we enter September, investor caution persists, with many awaiting new issue concessions before deploying capital. While upcoming supply may temporarily shift focus from the secondary market, it is unlikely to trigger significant repricing. Market momentum should remain intact. Political headlines continue to fluctuate, particularly around the Trump administration's attempts to influence Fed policy. Despite tight spreads, we remain bullish on Asia Credit. Absolute yields are historically attractive and fundamentals remain solid. S&P's positive rating actions on India have tightened benchmark names, with potential spillover to off-benchmark credits. Recent corporate earnings indicate stable to improving profitability and reduced leverage across sectors. With strong technicals and attractive all-in yields, we maintain a constructive view on Asia Credit, with a slight preference for HY over IG. Carry and security selection are expected to be key performance drivers.

Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Past performance is not indicative of future performance. Investors should read the offering documents for further details, including the risk factors, before investing.
