

Allianz US Short Duration High Income Bond

Monthly commentary

- The Fund aims at long-term income and lower volatility by investing in short duration high yield rated corporate bonds of the United States of America ("US") bond markets in accordance with environmental and social characteristics. The Fund aims to achieve the Sustainability KPI with the adoption of the Sustainability Key Performance Indicator Strategy (Absolute) ("KPI Strategy (Absolute)"). The Fund does not constitute as an ESG fund pursuant to the SFC's circular issued on 29 June 2021.
- The Fund is exposed to significant risks of investment/general market, creditworthiness/credit rating/downgrading, default, interest rate, valuation, sovereign debt, country and region, RMB and the adverse impact on RMB share classes due to currency depreciation.
- The Fund is exposed to sustainable investment risks relating to KPI Strategy (Absolute) (such as foregoing opportunities to buy certain securities when it might otherwise be advantageous to do so, selling securities when it might be disadvantageous to do so, and/or reducing risk diversifications compared to broadly based funds) which may result in the Fund being more volatile and have adverse impact on the performance of the Fund and consequently adversely affect an investor's investment in the Fund.
- The Fund may invest in high-yield (non-investment grade and unrated) investments and convertible bonds which may subject to higher risks, such as volatility, loss of principal and interest, creditworthiness and downgrading, default, interest rate, general market and liquidity risks and therefore may adversely impact the net asset value of the Fund. Convertible may also expose to risks such as prepayment, equity movement and greater volatility than straight bond investments.
- The Fund may invest in financial derivative instruments ("FDI") which may expose to higher leverage, counterparty, liquidity, valuation, volatility, market and over the counter transaction risks. The Fund's net derivative exposure may be up to 50% of the Fund's net asset value.
- This investment may involve risks that could result in loss of part or entire amount of investors' investment.
- In making investment decisions, investors should not rely solely on this material.

Note: Dividend payments may, at the sole discretion of the Investment Manager, be made out of the Fund's capital or effectively out of the Fund's capital which represents a return or withdrawal of part of the amount investors originally invested and/or capital gains attributable to the original investment. This may result in an immediate decrease in the NAV per share and the capital of the Fund available for investment in the future and capital growth may be reduced, in particular for hedged share classes for which the distribution amount and NAV of any hedged share classes (HSC) may be adversely affected by differences in the interests rates of the reference currency of the HSC and the base currency of the Fund.

What Happened in January

The high yield market finished higher in January. The fourth quarter earnings season got off to a strong start, with approximately three-quarters of reporting companies topping bottom-line consensus estimates, although forward guidance has been mixed. Corporate managements are balancing potentially easier financial and regulatory conditions, improving business sentiment, stable employment, and a resilient consumer, against stricter trade and immigration policies, as well as global growth uncertainties. Key economic datapoints released in January were largely positive. Manufacturing and services surveys surpassed estimates, inflation measures were in line with expectations, and the labor markets remained solid. On the other hand, retail sales, durable goods orders, and consumer confidence were weaker. As

ALLIANZ US SHORT DURATION HIGH INCOME BOND: MONTHLY COMMENTARY

widely expected, the US Federal Reserve (Fed) left interest rates unchanged. Against this backdrop, the 10-year US Treasury yield fell, and risk assets and core fixed income advanced.

The ICE BofA US High Yield Index returned +1.38% for the month.* BB, B, and CCC rated bonds returned +1.29%, +1.42%, and +1.64%, respectively.*

Spreads narrowed to 268bp from 292bp, the average bond price rose to 96.34, and the market's yield fell to 7.42%.

Industry performance was broadly higher with cable, energy, and real estate outperforming, while utilities, packaging/paper, and telecoms underperformed.

Trailing 12-month default rates finished the period at 1.43% (par) and 0.91% (issues). ^The upgrade/downgrade ratio declined to 0.7.^

Monthly new issuance saw 27 issues priced, raising USD 23.0 billion in proceeds. ^High-yield funds reported estimated net flows of +USD 1.5 billion.^

Portfolio Review

The US Short Duration High Income Strategy remains an attractive and actively managed solution as investors adjust to higher rates without taking excessive credit risk or price volatility in passive fixed income strategies. In the current market environment, the US Short Duration High Income Strategy can purchase securities at discounts to par, or selectively invest in high coupon new issue producing yields well above management fees and hedging expenses.

Fundamental credit research, low duration, and liquidity are key tenants and goals for the US Short Duration High Income strategy that seeks to strike an attractive balance between risk, opportunity and expected return. The shorter maturity profile of the Fund should protect capital going forward as there are fewer years to repayment to close the average price discount. Goals of the strategy are unchanged to reinvest capital prudently to defend and evaluate credit risk and company fundamentals against a challenging global environment.

Since inception over fifteen years ago, the US Short Duration High Income strategy remains US centric with coupons and repayment of principal in US dollars. The portfolio is services focused with non-domestic exposure and durable goods risk more limited versus the broader markets. The portfolio continued to stay up in quality while generally avoiding the lowest quality credits with average credit quality in the portfolio unchanged at B1/B+. Emphasis remains on credit selection, liquidity, and downside protection versus the broader market.

The US Short Duration High Income strategy is an actively managed solution with historically relatively high security turnover. This active approach to security selection should also allow the Fund to avoid some of the riskiest segments of the market further providing downside protection. Passive strategies may carry greater tail risk and show greater dispersion of investment returns. The US Short Duration High Income strategy selectively invests in opportunities that may present lower price volatility, risk-adjusted returns in line within the mandate, investment philosophy and Fund guidelines and importantly seeks to side-step and avoid many of the risks not appreciated by markets.

Performance in the period benefited from industry weightings and a consistent fundamental credit selection framework. Industries contributing the most to performance included Financial Services, Energy, and Air Transportation. There were no industries that detracted from performance in the period.

Liquidity remained in focus to pay distributions, meet redemptions and to take advantage of reinvestment opportunities. New purchases included issues in Automotive Parts & Equipment, Cargo Ground Transportation, and Automobile Manufacturers, while complete sells consisted of an issue in Cable & Satellite.

Outlook and Strategy

The US economy should continue to expand in 2025, supported by earnings growth, further Fed easing as inflation and the labor market continue to normalize, and the new administration's pro-US growth policies.

Apart from these factors, steady consumer spending, ongoing services sector expansion, continued fiscal spending, and improving productivity aided by the proliferation of artificial intelligence are growth tailwinds. Risk to the economy may increase if these trends weaken. Other considerations include tariff and immigration policies, geopolitical tensions, prolonged labor market softening, continued manufacturing contraction, and economic weakness outside of the US.

The US high-yield market, yielding over 7%¹, is expected to deliver a coupon-like return in 2025 with upside possible. As a result, the asset class continues to offer equity-like returns but with less volatility. The market's attractive total return potential is a function of its discount to face value and higher coupon, which also serves to cushion downside volatility. Credit fundamentals are stable, near-term refinancing obligations remain low, and management teams continue to exercise balance sheet discipline. Increased M&A activity and deregulation could also have a positive market impact. In this environment, new issuance is expected to remain elevated, the default rate should stay below the historical average of 3-4%, and spreads can remain tight.

Longer-duration issues are the most likely to be impacted by rising interest rates, but the overall high-yield market should have a dampened response due to its larger coupon relative to other fixed income alternatives. As a result, US high-yield bonds contribute from both a diversification and a relative-performance perspective, offering a very compelling yield opportunity.

The Short Duration High Income strategy remains an attractive fixed income solution without taking excess credit risk, the shorter maturity puts securities first in line to repayment at par, and the strategy lessens price volatility that may be highly amplified in passively managed strategies.

Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Past performance is not indicative of future performance. Investors should read the offering documents for further details, including the risk factors, before investing.
